I

LEGEND

Vrt-Vrs-Vst = MAIN VOLTAGE
Ar-As-At = CURRENT
Unbal = UNBALANCING
V A = VOLT - AMPERE
Eff = EFFICIENCY

Va = AVERAGE VOLTAGE
Vn = NOMINAL VOLTAGE
Tn = NOMINAL TORQUE
VI = LINE VOLTAGE
Va = STARTING WINDING VOLTAGE
Vc = CAPACITOR VOLTAGE
Al = LINE CURRENT

Ast = STARTING CURRENT
An = NOMINAL CURRENT
Tst = STARTING TORQUE

Aa = STARTING WINDING CURRENT
Am = RUNNING WINDING CURRENT

Ta = AMBIENT TEMPERATURE
R1 = RUNNING WINDING RESISTANCE
dt1 = RUNNING WINDING TEMP. RISE (K)
dt2 = STARTING WINDING TEMP. RISE (K)
R2 = STARTING WINDING RESISTANCE
Rmin = RUNNING COIL RESISTANCE (Tain)
Rain = STARTING COIL RESISTANCE (Tain)
Tain = AMBIENT TEMPERATURE (STARTING)
L1= RUNNING WINDING INDUCTANCE
L2= STARTING WINDING INDUCTANCE

Vrt-Vst-Vrs= Phase to phase voltage
Vave = Average voltage
Ar-As-At = Phase current
Aave = Average current
Squil % = Unbanlace
Win. = Input power
Wout. = Output power
VA = Apparent power
Eff. % = Motor efficiency Wout/Win. %
Cosfi: Power factor
Cst = Starting torque
Ast = Starting current
Temp.1 = Motor case Temperature (drive end side)
Temp.2 = Motor case Temperature (Non drive end side)
Amb.T = Ambiente temperature
R1 = Winding resistance phase to phase
dT1 = Running Winding temp. rise (calculated by variation ofresistance
method)
Ast/Anom : Starting current ratio
Cst/Cnom: Starting torque ratio
